

ERGOGEL™

ANATOMICALLY DESIGNED

Ergogel™ is a range of anatomical saddles with Royalgel™ and our patented twin-flex base.

Ergogel™ is a line of anatomically designed saddles delivering a gender specific solution to men and women, considering the anatomical differences and the cyclist's style of riding: sport, athletic, moderate, relaxed. Ergogel™ men's saddles feature a 35 mm wide central depression, which relieves the pressure from the prostate and reduces the compression of pudendal arteries and nerves, optimizing the blood flow to the penis and eliminating feelings of numbness. Ergogel™ women's saddles feature a narrower depression, which avoids the compression of the tissue at the centre of the saddle. Ergogel saddles have all been individually designed to maximize ergonomic relief.

TWIN-FLEX

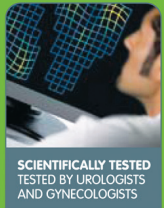

ERGOGEL DOCTOR'S SURVEY 2009

Painless riding pleasure on two wheels.
New bicycle saddle range ERGOGEL™ from Selle Royal.

Men and women are different – Selle Royal worked with the support of Prof. Baeyens from the University of Brussels to create saddles that are adjusted anatomically to male and female physiques. To ensure the feeding of oxygen to the pudendal nerves and arteries, male saddles should incorporate a 35mm wide canal. Female saddles need a smaller canal of 25mm to avoid strong compression or squeezing at the centre. A broad surface around the cavern of the saddle balance the pressure on both sides of the pressure discharge area where external pudendal tissues support part of the weight.

Hamburg, October 2008 – According to a survey of over 100 gynaecologists and urologists, on average more than 75% of their patients experience pain or feelings of numbness in their nether regions when riding. 85% even stated paraesthesias as a health effect.

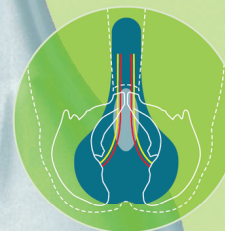

Selle Royal has successfully addressed this problem and offers the solution with its ERGOGEL™ saddles. In a test run especially for Selle Royal among the German medical specialists participating in this survey, more than 75% of the doctors declared that they did not have any symptoms of pain when using ERGOGEL™ saddles. 72% of the doctors stated that ERGOGEL™ saddles are more comfortable than any other saddle. 93% stated clearly that they would have no problem to recommend this saddle to any of their patients to help resolve problems.
